

Power BI. The power of data, delivered. A better view provides a better edge.

Power BI gives you the better view, harnessing data sources so you can know more, do more and make more impact. Based on a phenomenally powerful yet easy-to-use Microsoft platform, Power BI brings together data, charts, maps and reports to reveal the answers that matter. Designed for decision making, it helps manufacturers reduce costs, drive revenues and become more agile.

Put simply, Power BI revolutionises your business intelligence.

With Power BI you can explore and use data in ways that will boost your business, answering questions like:

- How can production be improved to save time, space and money?
- What's the least impactful maintenance and overhaul process available to me?
- What incidents and events are causing the most production downtime?
- Which suppliers damage my profits and reputation with their hidden costs or late deliveries?
- Where can production line layouts and procedures be altered to improve output?

That's just the beginning. Power BI can track and mix hundreds of company and public data sources to uncover hidden opportunities. And here at Compete366 we can show you how to dig into the data and fully explore those opportunities.

| Want to know more?

We've created a demo site that shows you just what can be achieved with Power BI. It demonstrates how complex decisions can be made simple when you combine and explore data in the right way. What's more, you can be up and running with some basic business analysis in just a few minutes. Discover how easy and effective business intelligence can be, [try the demo site here](#).

The Benefits of Power BI

Power BI is designed to deliver flawless business intelligence for manufacturing and production. You get what you need, when you need it, presented how you want it.

Delivered through Excel

Use a familiar interface that can be deployed as widely as needed across your company

Created to respond and solve

Type a question and immediately receive the answer in real-time, with results displayed as an interactive visual that changes as you modify the question

Connected to multiple data sources

Build refreshable data models from a mix of hundreds of company and public sources to create interactive dashboards with full access control

Built to look at information differently

Explore and navigate geospatial data on a 3D map, viewing information in new ways and making discoveries that won't have been possible in traditional charts

Designed to communicate ideas

Publish, share and consume powerful and striking reports that allow people to take action

Integrated into your systems

Use Power BI as an add-on to Office 365 or as standalone solution, either way it seamlessly integrates with all other Microsoft products

Want to learn more?

We've built a demo site to help you fully understand the capabilities and structure of the Power BI platform. Explore the interactive demo and discover what Power BI can do for your business.
